Abridged version of 'Two Talks on Japa Mantra Meditation'
by Pūjya Śrī Svāmī Dayānanda Sarasvatī
Compiled and edited under the guidance of
Śrī Svāmī Vāgīśānanda Sarasvatī

Introduction

This booklet is an abridged version of a booklet titled 'Two Talks On Japa Mantra Meditation', which was first published by Sri Gangadhareswar Trust in 1992. The original publication was based on two, live discourses given by the great Vedāntic ācārya Pūjya Śrī Svāmī Dayānanda Sarasvatī at the Arsha Vidya Gurukulam in Saylorsburg, PA, USA, during a three-year residential course in Vedānta. It is unknown precisely when these two talks were given. It is an analysis of the psychology of japa mantra meditation and its positive impact on an undisciplined mind.

It is the editor's opinion that great live discourses do not necessarily make for good publications without considerable editing. Pūjya Svāmī jī's intentions have, to the best of our abilities, remained intact. However, words, sentences and even entire paragraphs have been rearranged or omitted from this version for the sake of creating a linear, cohesive booklet on the subject of japa meditation. We sincerely bow in great respect to Pūjya Svāmī jī and ask forgiveness in the case of any errors in this text. The responsibility for error, if it exists, lies with the editors and not with Pūjya Svāmī jī.

It is our greatest wish that this collection of discourses profoundly bless the reader with a greater insight into the practice of japa mantra meditation, and the functioning of the mind.

Compiled and edited under the guidance of
Śrī Svāmī Vāgīśānanda Sarasvatī

Japa Mantra Meditation

The practice of japa meditation involves the repetition of a word, a short sentence or longer phrase which mirrors an aspect of the Lord. 'Ja' can be unfolded to mean 'that which puts an end to the cycle of death and rebirth' and 'pa'; 'that which removes or destroys all impurities and obstructions'. Therefore, japa mantra meditation is an indirect means for 'gaining' liberation (mokṣa).

The Unpredictability Of Thoughts

Contrary to popular belief, one can only process one thought at any given moment. What one's next thought will be is anyone's guess, but when it does arrive, it will have done so because of some form of logic associating it to the present thought. This connection may be flimsy or it may be direct. Yet, the next thought itself is never predictable. Even now, I cannot predict what my next thought might be. My intention is to discuss japa, and I am doing so. Yet, the present thought and accompanying words now arriving were not known to me just a moment ago.

BMW Thinking

Suppose you see a BMW on the road which draws your attention. Your next thought might be 'how can I get one?' And then your next thoughts might be 'a person at work just bought one/how can she afford such an expensive car?/last year she didn't even have a job/her husband must have a lot of money/I wish my husband came from a wealthy family/when I got married I didn't bother to think about money or my future...' This sequence of thoughts 'happened' because you saw a BMW. They do follow certain logic, yet this particular line of thinking is only one of an infinite number of possible thought patterns. Here's another possible scenario: You see a BMW on the road which draws your attention. Your next thought might be 'how can I get one?...' And then your next thoughts might be 'the German people are so industrious/even though their country was devastated during World War II, their economy quickly rebounded/they produce the best scientific equipment in the world...' The external stimulus or trigger for both of these thought patterns was you 'seeing a BMW on the road'.

In 'BMW-thinking', the connection between thoughts is not a conscious one. The next thought may be about anything; 'the BMW badge is different/it is not like the Mercedes badge...' Having a thought about the Mercedes badge gives rise to a thought about a

star, 'my astrological sign is not favorable...' This movement from one thought to the next is 'listless' thinking. It is an unconscious meandering of thoughts in which there is no direction. This is what an undisciplined mind does.

Restlessness Requires A Buildup

Listless thinking leads to 'buildup'. One's thoughts 'build up' in a listless mind. Without this buildup, one will never become restless. The problem is that buildup is not something that we do consciously. It simply gets 'built up', like a wall building itself. Suppose you have a pile of bricks spontaneously assemble into a wall. You would probably consider this event a miracle. Yet, one does not consider 'mental buildup' a miracle because it seems to be the normal state of the mind. However, it is a miracle because it just 'happens'. That one's buildup, builds itself, and that one has no say over this process, is truly amazing.

There is a feeling of helplessness regarding the process of mental buildup. Some event (either internal or external) triggers buildup. It may be hormonal, the weather, someone's look, indigestion, a frown, or any number of infinite possibilities. Any seemingly innocuous event may have a dramatic effect on potential buildup. Any event that one has resistance to can start a chain of events leading to buildup, and this process can go on accumulating over an entire day, a week, a month or longer. Restlessness requires a buildup to which I, myself, am not conscious of; yet this buildup is mine and mine alone. I do not look upon it as distinctly different from myself. I see myself fuming and do not know what to do about it. I have to do something because, although I am not conscious of its construction, I happen to be completely consumed by it. I am unable to keep track of this thought-by-thought, brick-by-brick buildup, because my whole approach toward thinking has been 'BMW-thinking'; unconscious, associative, 'listless' and non-directed.

The Beginning Of Thoughts

It would be a great disservice to a student if I were to simply advise her to stop this type of thinking and just 'nip it in the bud', without offering some kind of technique to make this bud-nipping possible. In 'BMW-thinking', the 'thought' appears as a fully-bloomed flower. By the time 'I' become 'aware' of it, the thought has transformed into a massive jungle and the process of buildup has begun. 'BMW-thinking' is not something that 'buds' and can then be 'nipped'.

The very manifestation of 'BMW-thinking' is its association with 'I'. Without its association with 'I', the listless thinking that leads to buildup would not begin. This type of mechanical thinking, associated with 'I' has no 'history'. It may come from childhood experiences or a behavior that we picked up from our parents, (which implies that they picked it up from their parents, and so on). If that is so, then this kind of habitual thinking pattern is beginning-less; having no genesis. There is no question about my lack of awareness regarding the 'first' thought, because I have become absorbed by the process of thinking itself. I have become the thought and the thought has become me. Thus, we return to the advice of 'nipping it in the bud' and realize that such advice is meaningless, and will only create more mental dysfunction and guilt for the student's seeming inability to 'control' her thoughts.

Learning About The Mind

We have never been properly instructed regarding the functioning of the mind. We only know that we are subjected to a particular type of thinking. If we were lucky, we had some intellectual discipline taught us in school which has given us the capacity for logical thinking. Through this practice, we may have developed some mental discipline, but neither do we understand it as a technique, nor do we utilize it as one.

The Chant And The Interval

There is a tree in India called the areca palm which produces the betel nut. The areca palm is similar to a coconut palm in that its trunk is very thin and fibrous and tapers at the top. By looking at the tree, one may deduce that it would not bend, even if one climbed it to the top. But that is not the case. It may be surprising to learn that the person who climbs an areca palm tree to gather the berries at the top does not need to descend and then climb another areca palm for more fruit. Instead, to reach the closest tree, one simply bends the tree top one is sitting in with one's bodyweight. In this way, one can move directly from tree-top to tree-top without ever descending. This is exactly what we do in 'BMW-thinking'. We are constantly walking the tree-tops without ever grounding ourselves.

The coconut palm does not bend like the areca palm. A coconut-picker must descend to the ground before climbing the next tree. Japa is like this. One descends to the ground; not after a length of time, but immediately. The phrase is chanted and, like harvesting coconuts, one descends. One chants and immediately descends; 'chant/descend/chant/descend/chant/descend...' During the practice of japa, being aware of the interval, the 'climbing down', is as important as the chant itself.

Japa As A Technique

When practicing japa, one has made a commitment as to which thought will be entertained next. When some other thought arises, it is clear that one has gone off the track. The practice of japa may incorporate one word, a short sentence, a section from one of the Vedas or even an entire Veda. However, for the practice to even be considered japa, the utterance must be something that is repeated.

Exercising one's will is an essential aspect of japa. If I choose to repeatedly chant a word or a sentence for a length of time, I have a technique in hand which will give me a greater insight into the workings of the mind. If something other than the chant manifests,

I know that this is not intended, and I bring the mind back to the intended thought. In the process, I then learn, outside the context of japa, how to dismiss unwanted thoughts and retain the thought I have chosen to 'entertain'. This is an important benefit of japa as a technique.

As one explores the technique of japa, one is strongly urged to see the mind through the lens of compassion; that when one speaks of the 'mind', one is speaking about the whole person. The mind is not a 'whipping-boy', nor is it to be 'manipulated' in any way that creates agitation. The 'goal' of japa is to achieve mental mastery; to be able to wield the mind with prayerful attention.

The Interval Between Thoughts

The advantage of using the technique of repetition is that one will become more aware of the interval between two successive, yet alike thoughts. In 'BMW-thinking', one's mind is 'listless', with no specific occupation or focus. The mind moves aimlessly from one thought to another. This type of thinking is like trying to pick up a single, very thin, cooked noodle from a pot of cooked noodles. If one tries to pick up only one noodle, one cannot help but find it associated with other noodles. Similarly, the whole occupation of listless thinking seemingly becomes a single, unbroken thought, even though there are actually many thoughts strung together.

BMW is the brand name of a vehicle and Germany is the name of a country. Because of the direct sequential, *differentiated* link between these two thoughts, the potential space between them does not manifest. However, there is a 'space' between two sequential, yet *undifferentiated* thoughts. Repeating a given chant avoids this direct sequential differentiated linking of thoughts, which allows the spaces between them to become evident. This happens because there is no difference between one chant and the next. Each chant is a complete unit. Therefore, one 'becomes' aware of the fact that there is a period (meaning both 'a momentary pause' and 'a punctuation mark which denotes the stopping of a sentence')

between two chants; `chant/period/chant/period/chant/period...`
There are no commas. Only a period; a full-stop.

Peace In The Mind

There is a pause in mental activity between two `alike` thoughts; an interval, without form or shape. This is what we call `peace` or `silence`. There is no `thinking` in this silence because there is no particular thought form being manifested. We believe that peace is something we have to work for. Many will directly ask for it. Because the nature of an undisciplined mind seems to be listlessness and restlessness, we believe that `peace` is a `state` which has to be diligently cultivated.

An Occupation For The Mind

I once met Svāmī Rāmayya. He was originally a yogi and then became a disciple of Ramaṇa Mahārṣi. I could sense that he was a person who was at peace with himself. By that time in my life, I had made my commitment to Vedānta. At the same time, I had a lot of conflicts regarding that commitment. I went to Svāmī Rāmayya in an effort to resolve these conflicts. He never talked much, but he said one thing that really hit home: `For restlessness, one has to work a lot. For peace, what is there to do?` After making these statements he became very quiet, which had a deep and profound effect on me.

I can give the mind a meaningful occupation wherein `BMW-thinking` or `listless` thinking (also called `chain` thinking) is broken. This, in turn, may reveal a great truth about myself; that I am the silence, the peace, that is in-and-through all thoughts. One can see how restlessness requires buildup, whereas `peace` is `natural`, for which we need do nothing. One `creates` restlessness. Peace is our very nature.

In japa, one deliberately chooses a thought to `entertain`. Because one has a will, one has the ability to make this choice. One becomes the `author` of a given thought. A specific thought is manifested because it has been chosen. However, the silence that is

`revealed` in the spaces between these thoughts is not created by you. In truth, silence is the basis for all thought.

The Nature Of Thought And Silence

Absence of thought is generally understood to be something `achieved`. To this end, thought may be suppressed or negated by certain external disciplines, such as the practice of breath control. It is difficult to think during the retention of breath. I challenge you to try it. Hold your breath and try to think. It is very difficult. The thought that will predominate is the one regarding the need for taking a breath.

The student of Vedānta is not interested in manufacturing the absence of thought. The student of Vedānta is interested in understanding the `nature` of thought and the `nature` of silence. As the thought arrives and departs, one observes the `nature` of the thinker, the `nature` of the thought and the `nature` of the silence itself.

The Mind As A Dancer

In the 10th chapter of the Vedāntic text `Pañcadaśi`,* the mind is likened to a dancer on a stage. The dancer performs a variety of aesthetic sentiments; love, helplessness, anger, cruelty, wonderment, fright. The light which illumines the stage also illumines the dancer as she portrays these sentiments. As she exits the stage, the light remains, illuminating the bare stage. The light itself is not a `do-er`, and certainly not an `enjoy-er` of the dance. Illumining the stage is not the `job` of the light. The nature of light is to illumine and that is what it `does`. The verb `illumine` involves no action or motive on the part of the light. Similarly, what remains after a thought exits is `illumined` silence, just like the `illumined` stage after the dancer has exited.

*Nāṭaka Dīpa Prakaraṇam

I Am Silence

What I experience, or am aware of between two thoughts, is silence. Thought arises and thought falls. Before the rise of the thought I am silence. After the departure of the thought I am silence. I am silence first and I am silence last. Therefore, in spite of thoughts, I am silence. The practice of japa does not give me this knowledge. Yet, by doing japa, I create a situation wherein something that is understood by me is understood more clearly; the understanding that my very nature is silence.

Nipping Thought In Its Bud

By practicing the technique of japa meditation, one actually learns how to 'nip a thought in its bud'. By being aware of the interval between thoughts, one gains the capacity to actually 'observe' a thought as it arrives, thereby giving one the ability to use free will in either choosing to 'entertain' the thought or not.

Sound As Technique

A common practice among many meditators in the West is to chant special syllables as a form of invocation; so-called *bijākṣaras*. For example; *śrīṁ*, *hrīṁ*, *aiṁ*, etc. These *bijākṣaras* are traditionally invoked for the purpose of meditating on a particular deity. The mind will naturally have an occupation when these *bijākṣaras* or any other one-syllable 'word' (such as *Rām* or *śyām*) are chanted. Because the chant is repetitive, 'BMW-thinking' is eliminated.

That any sound will work as a technique for relaxation was demonstrated by a scientist using a meaningless sound while observing changes in his subjects' various physiological functions. While the subjects chanted this sound, their heart rates and breathing rates slowed significantly.

These findings are not surprising, as the subjects were sitting quietly, their minds occupied with the repetition of the meaningless sound. Had their thoughts focused on some personal problem, there

is no doubt that their physiological functions would have become agitated. Based on the results of this study, the scientist wrote a paper in which she concluded that a special chant or mantra is not required to relax the mind; that the repetition of any sound, even a meaningless one, could produce the benefits she had observed.

As a technique, any sound that is repeated will work if the goal is simply relaxation. And for some time the body and the mind will be quieter. Yet, over a longer period of time, one may become aware that one is sitting and chanting a meaningless sound and lose interest in the practice.

A Meaningful Chant

If as sound that is chanted has no meaning, it will only serve as a 'technique'. In the same way, any 'word' chanted will also only be a 'technique'. Neither of these techniques are japa. A meaningless sound will remain meaningless and lack impact. A random 'word' will also lack impact and will only generate thoughts relating to that word.

A Name For The Lord

For this discipline to actually be called japa, a special word or set of words is required for repetition; a mantra. A mantra will be a word or set of words that does not represent any specific material object. One chooses a mantra (or has one chosen for her) that represents the entirety of 'creation'. This is how a 'meaningful' word becomes truly meaningful and all-inclusive. Within a mantra, all words are included; all worlds are included; all languages are included; all objects, peoples, places are included. Traditionally the words of the mantra will vary, but in one's mind, the words chosen will stand for everything.

Gāyatrī Mantra

Any action that one undertakes should be meaningful. One need not know the entire meaning of a mantra; one only needs to be aware that the mantra has meaning.

In India, it is quite common for a child to be initiated into a mantra called Gāyatrī. When I was initiated into the Gāyatrī as a young boy, I was not told its full meaning. I was only told that it was a prayer, asking the Lord for a bright mind, and that if I repeated it, my mind would become bright.

Gāyatrī is a Vedic Sanskrit prayer to Lord Sūrya, the sun. Sūrya represents the all-knowing Lord who makes one's mind brilliant. This is all I was told. And although I was not given the mantra's entire meaning, to me it was meaningful enough because it was a prayer. Only later would I gain a full appreciation for this particular mantra.

Chanting the Gāyatrī serves as a discipline, helping a child to learn how to prayerfully manage her mind. It works because, as the child chants the mantra, the child's mind will wander. The child is then instructed to bring the mind back to the mantra, thereby learning how the mind functions. At an early age the child will gain insight into how the mind works. This is not an ordinary habit for a young person, or for that matter, any person to acquire.

Chants And Mantras

There are Vedic 'words' that are sometimes chanted which are not mantras; 'so'ham...so'ham...so'ham...' This 'word' means 'He-I-Am': 'He', referring to the Lord. Nowhere in the scriptures does it say that so'ham is a mantra. So'ham is a fact. It is a sentence to be understood. It has the same meaning as 'tat tvam asi'; 'you are that'. If you are the Lord and the Lord is you, then there must be some non-difference or commonality between you. Since the differences are obvious, one need not inquire into them further. It is the non-difference that one needs to 'know'. Understanding this non-difference is the subject matter of Vedānta.

Mastery Over The Mind

Japa mantra meditation is a tool which enables one to negate a distracting or 'improper' thought by deliberately replacing it with a

chosen thought. Japa gives one an opportunity to eliminate 'BMW-thinking', to stop the cycles of buildup, and become more aware of the interval, the silence, between thoughts. Japa is helpful in gaining mastery over the mind.

Over a period of time, once a person has made the commitment to the discipline of mentally repeating a given mantra, a person's mind will automatically go to that mantra whenever it is free to do so. Just as water cascading down a mountain slope will create new ravines, a new 'thinking track' is created toward which the mind will repeatedly be drawn. Japa meditation becomes a way of keeping the mind meaningfully occupied. Therefore, japa is a useful and prayerful activity. The mind comes to a place of composure; of equilibrium. One understands that all mental distractions and agitations are transitory. One is not dominated by 'listless' thinking which will, inevitably lead to buildup. A mind that understands this has depth and tranquility.

Japa Is A Mental Prayer: A Conclusion

Japa mantra meditation invokes the Lord. It is neither a meaningless sound, nor does it denote a particular object. Only when the repetition of a mantra becomes a mental prayer to the Lord is the discipline called japa. Japa is recognized as an indirect means for gaining liberation because it destroys all obstructions and impurities, thereby preparing the mind of the devotee for 'knowledge', which is 'liberation'.

Japa is very effective when practiced in conjunction with the study of Vedānta. Even 'outside' of Vedānta, the practice of japa is beneficial, in that it gives mind a purposeful occupation.

In Chapter Ten, Verse 25, of the Bhagavad Gītā, Lord Kṛṣṇa says, 'There are many forms of rituals and many means through which I am invoked, but among them all, I am japa.'

yajñānām japa-yajño'smi

पूज्य श्री स्वामी दयानन्द सरस्वती

Pūjya Śrī Svāmī Dayānanda Sarasvatī

Pūjya Śrī Svāmī Dayānanda Sarasvatī (1932 – 2015) is considered the leading figure in the renaissance of the study of Advaita Vedānta in the late 20th century. A 'teacher of teachers', Pūjya Svāmī jī took dikṣa saṁnyāsa in 1962 under the guidance of Svāmī Cinmayānanda Sarasvatī. Pūjya Svāmī jī studied the complete traditional teaching methodology from his sadguru, Svāmī Praṇavānanda. He then refined his teaching skills by studying the Brahma Sūtras with Svāmī Tārānanda.

In 1972 Svāmī Dayānanda began the first of what would become 10, three-year courses which would take place over the next 40 years. These courses focused on the study of Advaita Vedānta and Sanskrit.

Pūjya Svāmī jī established four traditional teaching centers for the express purpose of the study of Vedānta and Sanskrit. These centers are located in Rishikesh (Uttarakhand), Annaikatti (Tamil Nadu) and Nagpur (Maharashtra) in India, and in Saylorsburg, PA in the United States.

Current estimates regarding the number of Pūjya Svāmī jī's students who currently teach Vedānta and/or Sanskrit at 200. Sanghas of these teachers may be found in such diverse locations as California, Madras, Réunion, Sweden, Hawai'i and Brazil and in many other locations around the globe.

Pūjya Śrī Svāmī Dayānanda Sarasvatī's contribution to the study of Vedānta is incalculable. His legacy of centers of learning, recorded discourses, books and most of all teachers, will continue to bless the world for many years to come.

॥ हरिः ॐ ॥

श्री स्वामी वागीशानन्द सरस्वती

Śrī Svāmī Vāgīśānanda Sarasvatī

Śrī Svāmī Vāgīśānanda Sarasvatī is a senior disciple of Pūjya Śrī Svāmī Dayānanda Sarasvatī, and has been studying and teaching Vedānta since 1975.

Svāmī jī was in his teens when he became fascinated with mystical poetry and non-dualistic philosophies. In 1975, at the age of 19, he left his home in the United States and traveled to India to study in a traditional gurukulam. After graduating from a three-year residential course in Vedānta and Sanskrit, he attended four subsequent three-year courses in the United States and in India.

Using the traditional methodology called saṁpradāya, Svāmī Vāgīśānanda 'unlocks' the scriptures of Vedānta, thereby removing the veil of ignorance; the cause of all human suffering. He is a traditional saṁnyāsi (a renunciant who is committed to a life of knowledge and has taken a vow of non-injury). A master of the South Indian Kṛṣṇa Yajur Veda style of chanting, Svāmī jī travels the world teaching Sanskrit, Vedic chanting and Vedānta.
